## **QUATRO COMPOSITES™ ANNOUNCES NEW SOFTWARE SYSTEM**

**Orange City, IA** - Quatro Composites™, a leader in design and fabrication of advanced composite structures, has announced the implementation of a new software system, Plex Online, a cloud ERP manufacturing software created by Plex Systems, Inc.

With Plex Online, manufacturers like Quatro Composites are able to access all of the analysis and management functions of a full-featured manufacturing system simply via their web browser. Plex Online's comprehensive functional coverage delivers a "shop floor to top floor" view of operations, enabling Quatro management to run its business at maximum efficiency.

"In my opinion the benefits of implementing Plex Online made it easy to switch to a cloud ERP system," said Tim Van Zee, Director of IT at Quatro, "Plex has the necessary modules and functionality for all Quatro departments to use the software, giving better visibility to activity in both our Iowa and California locations. In addition, Plex excels in traceability and quality, utilizing a paperless method which will greatly reduce our administration costs. We're excited to see the efficiencies that Plex Online will produce."

*Quatro Composites™, a wholly owned business of Tec Industries, LLC, is an Iowa-based advanced manufacturer offering a full line of services from design, analysis, prototyping and production of advanced composite products. Quatro manufactures and engineers products for the aerospace, military / defense, industrial and medical markets. The business operates in two locations, Orange City, Iowa, (Headquarters, Manufacturing & Distribution) and Poway, California (Technical Development Center).
